Capacitive Water Level Monitoring System (Team Lead)

May 2026

- Led a team of engineering students in the development of a capacitive water level monitoring system for agricultural water tanks.
- Designed and analysed sensing, infrared transmission, and analogue receiver subsystems using LTspice simulation and prototype testing.
- Selected and optimised component values through theoretical analysis, simulation, and experimental validation.
- Evaluated design trade-offs involving signal integrity, component cost, bandwidth, noise immunity, and system reliability.
- Delivered a fully functional prototype and achieved the highest project report grade in the cohort (14.5/15).

PROFESSIONAL EXPERIENCE

VAPO

March 2024 - Present

Sales Representative

Mount Wellington, Auckland

- Provide premium service in a specialist store setting, focusing on optimizing sales, profitability and customer satisfaction
- Implementing my vast product knowledge to accurately determine wants and needs and make excellent recommendations
- Analyze device issues to offer solutions within the company's return policies

VAPO

February 2023 - February 2024

Store Manager

New Lynn, Auckland

- Performed routine data entry and completed regular store performance reports
- Managed full and partial inventory stock takes with minimal losses.
- Trained and motivated team with regular one-on-one training sessions, filling out individual coaching logs for staff, and goal setting.

TECHNICAL STRENGTHS

Design Software

Altium Designer, Quartus 2, Autodesk Inventor, LaTeX, Microsoft Office, R Studio,

Simulation Software

Proteus 8 Professional, LTspice, FEMM

Workshop Skills

3D Printing, Soldering, Health and Safety Protocols

Programming

MATLAB, C, Python, Java, Git, FPGA, Microchip Studio
